A new connected interface

Accessible

A rich, intuitive interface for easy access to your favourite tools and apps, all in one place.

Efficient

Greater productivity thanks to a range of widgets: an agenda to start video conferences instantly, notes for sharing information with your audience, weather, etc.

Unique

A fast, seamless interface, no matter what operating system you use or plan to use: Android, Windows, Mac, Linux.

A workspace that's always by your side

Connect: everything you need, right in your pocket

A workspace that connects to your smartphone and slips into your pocket, so you can take your data and apps with you wherever you go. Your workspace is displayed on the screen at your request, and disappears when you leave the screen.

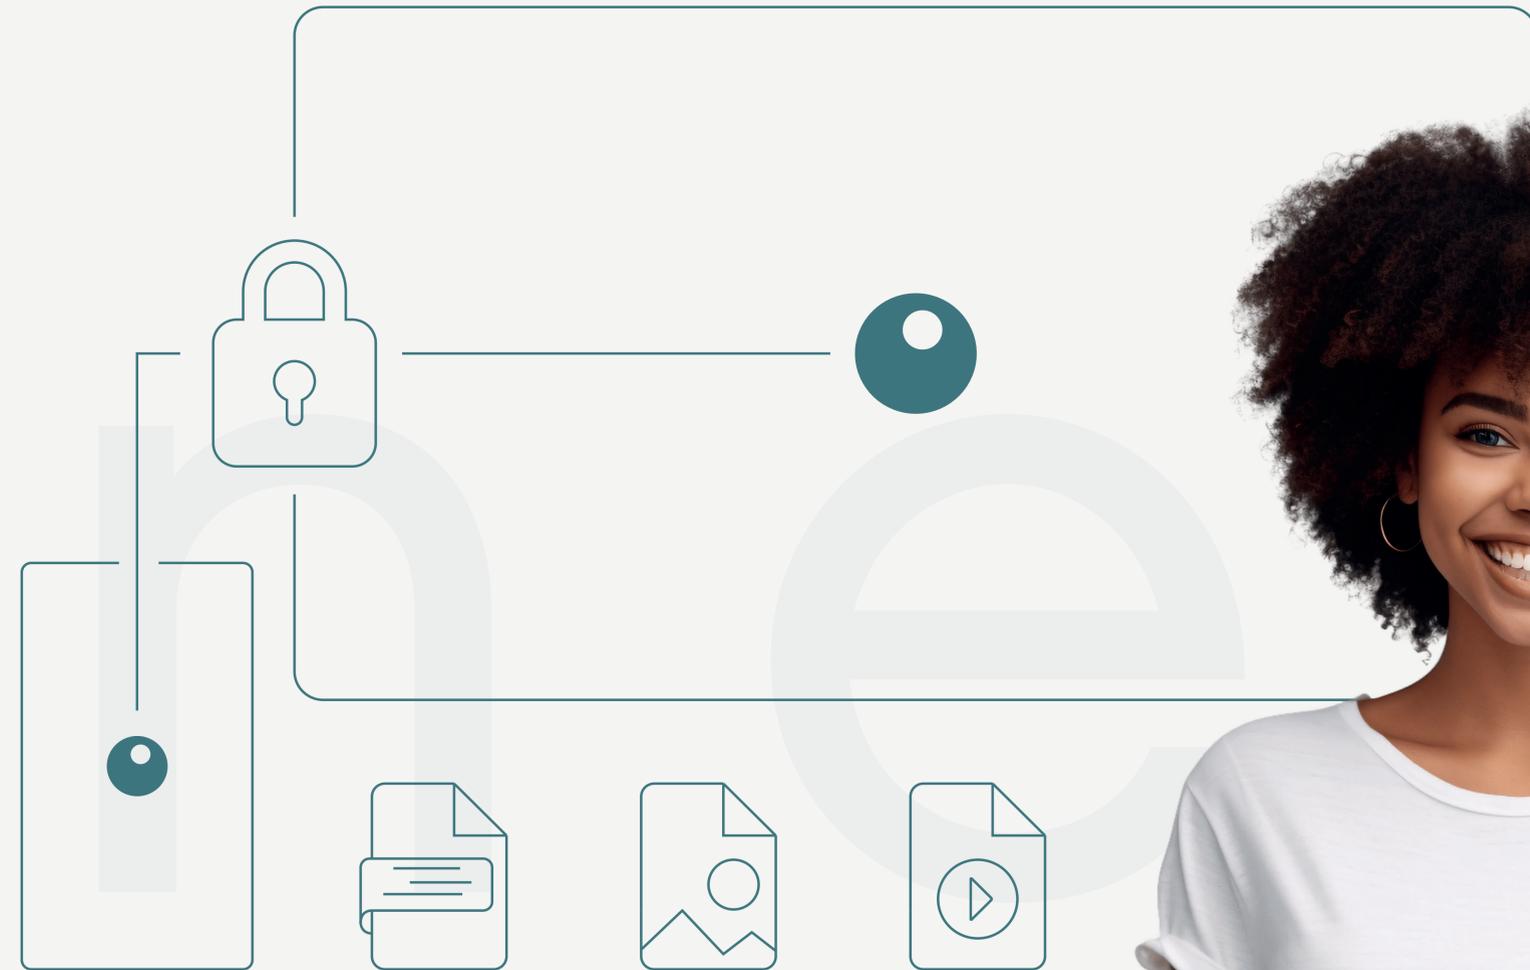

A workspace tailored to you

When you connect to a screen, it adapts to your way of working for a personalised experience. Set up your workspace on your smartphone and access it anytime and on any screen (create a profile, choose a theme, add your favourite apps and shortcuts, etc.).

Connect & Go!

Connect to interactive screens easily via your smartphone to access your personal workspace. All finished? Disconnect your phone from the screen, and all your work goes right back into your pocket.

Stress-free connecting and sharing

Maximum security

The screen may be shared, but your workspace is yours alone. While you're connected to a screen, that screen will display your personalised interface for secure access to your data. When you disconnect, the screen will return to its original interface, ready for the next user.

Guaranteed confidentiality

No need to enter your username and password or login to the screen, everything is done via your smartphone. Your data is never stored on the screen, it travels with you wherever you go.

Easy sharing

A secure interactive and collaborative interface for transferring files to screens and easily sharing content, with no limits.

A personalised fleet with you at the wheel

Centralised screen management made simple

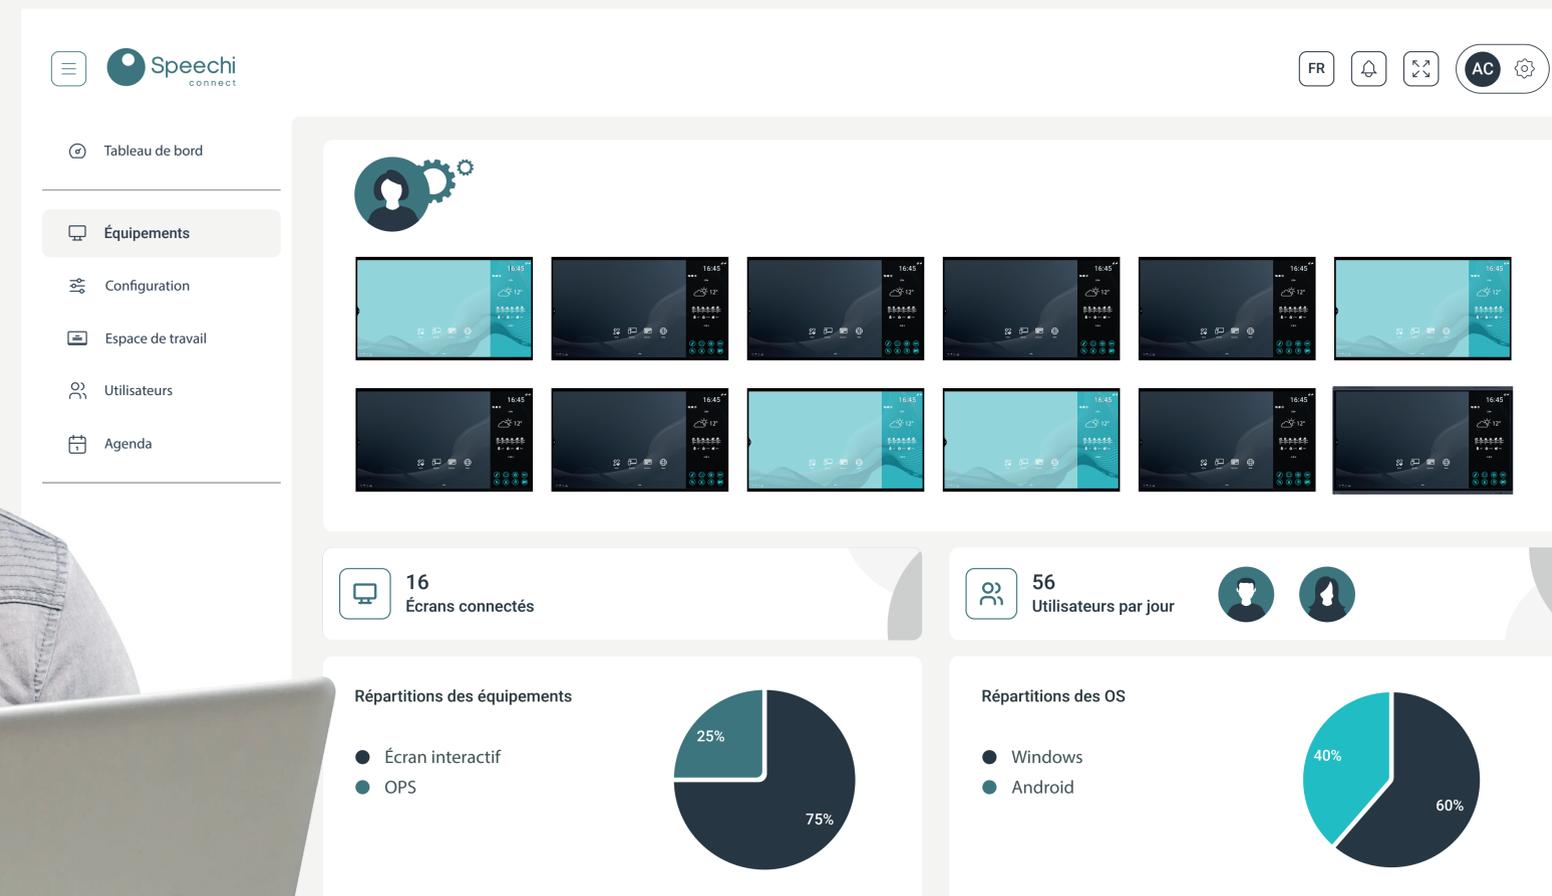

A SaaS platform for managing and defining a usage strategy and user rights for your fleet of screens.

Controlled access

Screen access is secure and easy-to-manage. Import and define user rights for your fleet, manage your app store, and allocate and prioritise user permissions.

Advanced customisation

Speechi Connect offers an advanced degree of customisation, so you can configure your screens, manage your meeting rooms, protect your fleet when working with external users, select which programmes are available, and install your own apps.

This is only the beginning

A new way of interacting, coupled with an evolving user experience with regular updates and new features.
